DETAILED ACTION

Examiner Amendments

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Attorney Bruce Slayden on June 13, 2005.
3. The application has been amended as follows:
4. In the claims:
 - In claim 1, line 10, insert --- transistor --- before "pair", line 11, replace "any one of a tri-state, active high or active low mode" to --- a mode selects from a group of modes consisting of tri-state, active high, and active low modes ---, and insert --- output transistor pair --- before "is".
 - In claim 2, line 2, and claim 3, lines 2-3, claim 4, line 1, claim 5, lines 2-3, and claim 6 line 1, insert --- transistor --- before "pair".
 - In claim 8, line 9 and claim 14, line 6, replace " tri-state, active high or active low mode" to --- mode selects from a group of modes consisting of tri-state, active high, and active low modes ---.

Allowable Subject Matter

5. Claims 1-20 are allowed.
6. The following is an examiner's statement of reasons for allowance.

- The prior art fails to teach an apparatus of Claims 1-20 that specifically comprises the following:
 - The instant application is deemed to be directed to a non-obvious improvement over the admitted prior art of the instant application and the invention patented in Pat. No. 5,450,027, 5,561,384, and 6,300,800. The improvement comprises that the configuration bits causing the output control logic to configure the output transistor pair to operate in a mode selects from a group of modes consisting of tri-state, active high, and active low modes when the output transistor pair is not enabled for PWM data output.
- The admitted prior art of the instant application and the invention patented in Pat. No. 5,450,027, 5,561,384, and 6,300,800 teach the configuration bits causing the output control logic to configure the output transistor pair to operate in a tri-state mode or active low mode when the tri-state control logic disables the data output. None of them individually or in combination teaches the features described in the above paragraph.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. Reference US 5,218,239 and US 6,300,800 is cited because they are put pertinent to an integrated output circuit with enable control logic. However, none of references teach detailed connection as recited in claim
